

PRIKLJUČNI KABLOVI

CONNECTION CABLES

Priključni kablovi su skup savitljivih električnih vodova, najčešće izrađenih od bakarnih licnastih provodnika, različitih preseka izolovanih PVC masom. Imaju široku primenu a najviše se koriste za izradu priključnih kablova za mašine, električne aparate, šporete, frižidere kao i za izradu produžnih kablova.

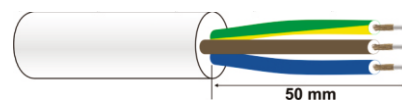

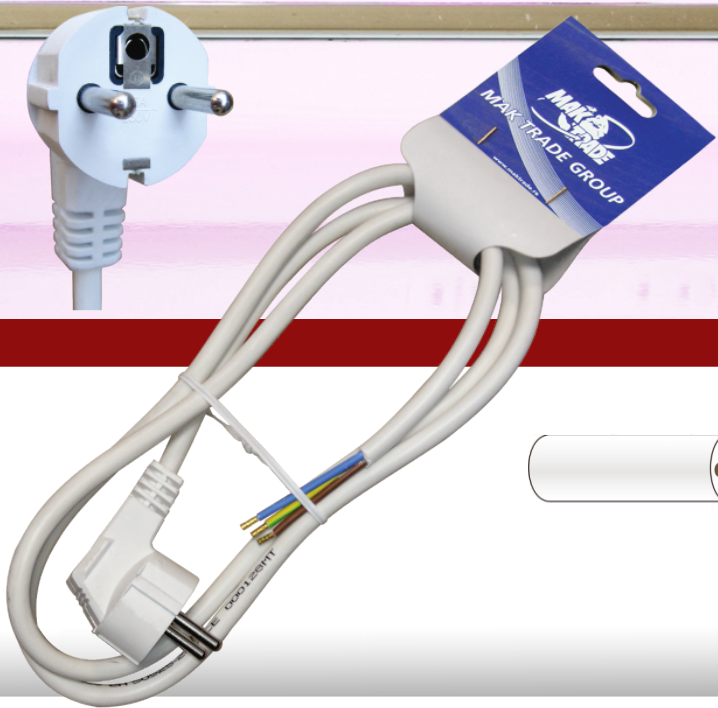

Connection cables are a set of flexible electrical lines, usually made of copper personal conductors, of different cross-sections insulated with PVC mass. They have a wide application and are mostly used for the production of connection cables for machines, electrical appliances, stoves, refrigerators, as well as for the production of extension cables.
